Talks at GS

Sixth Street CEO Alan Waxman on Sports Investing and Identifying Opportunities

Date of recording: September 3, 2025

Alan Waxman: I'll never forget the day one of my colleagues sent me an email, "NBA, just changed their rules," and literally within 10 minutes cold calls the San Antonio Spurs, their advisor, cold called the league, how do we get in there. And literally within, like, two weeks we had traction and we ended up doing one of the first deals in the NBA for the San Antonio Spurs.

David Solomon: Good afternoon, everybody, and welcome back to Talks at GS. I'm thrilled to be joined by Alan Waxman, who's cofounding partner and co-CEO of Sixth Street. Alan is also, more importantly than this great firm he's built, he's an alum of Goldman Sachs.

Alan Waxman: Proud alum. Proud alum.

David Solomon: Proud alum.

Alan Waxman: Proud alum.

David Solomon: Proud alum of Goldman Sachs where he served as a partner and the chief investment officer of what was called at the time our Americas Special Situations Group. Nice piece of Goldman Sachs history. Alan went on to found Sixth Street, a multi-strategy private investment capital firm with over $115 billion of assets under management. The firm focuses on identifying the best relative risk-reward across asset classes, industries, geographies, and works as one team to partner with founders, management teams, and companies to deliver all sorts of flexible capital solutions.

Sixth Street -- and I think this is fair to say -- invests in everything. It's a pretty wide range of things from sports teams like Real Madrid, more recently the San Francisco Giants, Boston Celtics, tech companies like Airbnb and Spotify, real estate infrastructure, energy, and more. So let's welcome Alan back to Goldman Sachs.

You've said of Sixth Street there's no firm in the world that's private and looks like us. What did you set out to build when you started Sixth Street, when you went off, and I remember when you did this, what did you set out to

build, and how did your time at Goldman Sachs kind of shape your vision?

Alan Waxman: What I meant when I said that is that the pace of change in the world has been accelerating since 2001-2002, and that we built a firm with no fiefdoms or silos. So let me just give some context to that. John Urban, do you remember John Urban?

David Solomon: I remember John Urban very well.

Alan Waxman: So John Urban, he was my first guy I worked for. Great guy. Great family guy. Super talented. And he would basically say the only thing constant around here is change. And I remember very specifically because I was covering all the -- you remember the fiber builders? I was covering them, and there were hundreds of -- just for everyone, for background, this is, like, '01-02, this is the telecom bust. Hundreds of thousands of miles fiber, fiber optic, fiber way beneath soils, beneath oceans, and basically the whole idea was to enable the expansion of the Internet.

And I remember very specifically walking to --

David Solomon: By the way, they're all worth zero today, which is just an interesting thing to think about.

Alan Waxman: Yeah, which is maybe some parallels to what's going on in AI. I'm sure we'll talk about that. But I remember specifically walking to another partner, Jody LaNasa one of my business partners, and I walk into his office. And we were covering, we were studying, like, should we invest in it? And I remember walking in and I just said, you know, John -- because John always said, like, the only thing constant is change. I said, well, change is going to get a lot faster.

So that was, like, one of my first most profound learning at Goldman. Goldman back then -- it's hard to believe now given the culture at Goldman -- but back then there were these ten fiefdoms all run by different partners. You know, this is really one of the most profound learnings but also one of the ideas of Sixth Street is that we were on the 27th floor. This is back at 85 Broad. Not as nice a building as this. And we took a negative view on the fiber optic builder. We just didn't see how, despite the expansion of the Internet, we didn't think that the economics made

sense.

The floor above us on the 28th floor, they had a very different view. They went all in. And guess what? Telecom bust. We didn't invest. The other guys, you know, again, very smart people, lost a lot of money. And after that, and David Viniar remembers this, said, "This doesn't make any sense." There's all these fiefdoms and silos. No one's talking to each other. Let's put all this under what became the Special Situations Group. Sharing relationships, sharing ideas.

And those two ideas are really my two biggest learnings from Goldman Sachs as it relates to the idea of Sixth Street. So what I meant when I said that is that Sixth Street has been purpose-built from day one. Our culture, one-team culture, no egos, no politics, no BS. Our architecture organically built, flexibility, incredible flexibility of mandates, and a multi-strategy private capital firm. And that we built a set of capabilities.

So ten asset classes, 16 sector teams, all that has been deeply intentional built for those two things, a changing world and also so that we all talk to each other.

David Solomon: Yeah. You have in your unique style and the way you look at things something you call your TAO Strategy. Describe that.

Alan Waxman: Okay, so TAO, just for everyone in the room, TAO is our $30 billion cross-platform investing vehicle. So all across Sixth Street, all our asset classes, all our sectors, it's migrating to the best risk-reward across all these ecosystems. And although they're all different deals -- we have Wingstop in there, we have Boston Celtics in there, we had Airbnb in there, we have Spotify, we have real estate deals, we have infrastructure deals. It's got yield and then it's also got convexity or what's upside notes.

And the whole idea of TAO, the original idea really started -- have you ever been to Rosa Mexicano?

David Solomon: Sure.

Alan Waxman: Is that on your --

David Solomon: I mean, it's been a number of years.

They have very good guacamole that they --

Alan Waxman: Yeah, so actually, you said that. So Rosa Mexicano midtown, I was there with my partner Jamie Gates, one of the cofounders of Sixth Street but also we call him the Godfather of Sixth Street. And we were sitting there, this is even before, like, Sixth Street was forming. And we were sitting there, white paper napkins, sleeves rolled up, we'd been to a bunch of meetings, and we're just trying to solve three issues.

The first thing we were trying to solve when we thought about TAO is how do we recreate synthetically the Goldman Sachs balance sheet? Because the Goldman Sachs balance sheet, you could be complete flexibility, can invest across asset classes as long as we didn't lose money. How do you create that? Because at the time, if you remember, LPs were set up in a very siloed way. You know, there was private equity, there was real estate, it's very siloed. So there wasn't really sort of a natural -- like, when we talked about the flexibility, they looked at us like we had three heads. So that was the first thing.

The second thing is that we studied a lot of GPs. And one

of the things, there's a lot of takeaways, but one of the takeaways is where GP is at fault -- and this is before we founded Sixth Street -- is they raised larger and larger funds irrespective of the opportunity set. They just raised it because they can raise it.

And the third thing we were trying to solve is we want to be able to solve those first two things but also be able to consistently write billion to $3 billion checks. So that was kind of literally white paper napkin. There was a moment Jamie and I looked at each other, and it was, like, there's lots -- we call it playing tennis with each other. And there's a moment we just kind of looked and it was, like, an aha, and that was TAO.

And this was something that a bunch of forward-thinking LPs got behind early. So our first vintage of TAO was 2 billion. And since then, you know, now it's 30 billion. It will continue to grow over time. But really when you think about what TAO is, is TAO is setting up an investor-first architecture so that we can raise our strategy fund. So we have all these different strategy funds. So take our growth business. Instead of raising a $10 billion growth fund, we raised a $4 billion or $3 billion growth fund based on the

opportunity set. But at the same time, we can speak to billion dollar checks because TAO's in the background. So it's our whole architecture that we built at Sixth Street is designed to be an investor-first firm, and it starts with TAO.

David Solomon: So talk a little bit, I mean, one of the things I've observed, you've got an extraordinarily entrepreneurial mindset in the way you approach things. Talk about how you think about that.

Alan Waxman: So right brain, right brain thinking, partnership, and our whole investment approach. And what I mean by that is we have this thing at Sixth Street called tennis. Like, if you talk to -- we have, like, 700 employees. If you talk to anyone at Sixth Street and you say, "Let's play tennis," that's this whole idea. Alpha people, highly substantive, got strong opinions. How do they interact? How do they share ideas? How do they compare relative risk units and return units? And it really starts with how we develop themes.

So typically at Sixth Street we have 50 to 60 themes bubbling through our platform. We narrow it down to 15

to 25 themes. So there's an entrepreneurial -- we always say entrepreneurialism is a team sport. So we're constantly playing tennis with each other to evaluate what are the best themes that can narrow down to the best 15 to 25.

And then on deals, we take that same -- we call it right brain thinking. Like, we talk about the right brain all the time because we think about investing as a left brain exercise, but also a right brain exercise. And part of the creative process is when we get a deal, let's say actually a deal we worked on with you guys, like FC Barcelona. When we sit on a deal with someone and we don't just go to them and say, "Hey, we're trying to buy your company. Hey, we're trying to buy your assets. Hey, we're trying to lend you money. Hey, we're trying this."

We sit down with a whiteboard and we just literally create ideas together. So founders and CEOs, we literally sit down with them. This is, like, you know, this why we'll never be a deployment factory type business. We'll always be an investor first. It's sitting down and we sit with a whiteboard and we literally craft solutions together. And it's that whole utilizing the right brain not only in terms of

picking themes but it's also just on every deal that we do is taking that whiteboard and trying to think of solutions or ideas typically collaborating with founders and CEOs. That's kind of what we do.

But it's a team sport. It's a team sport with, like, externally, with founders and CEOs. And internally, it's a team sport with each other. And that's kind of how we think about it.

Like, our first business plan is we literally put on our first strategic plan at Sixth Street. We always -- we're in our fourth 5-year strategic plan. And literally we're constantly thinking about this, but literally on our first 5-year strategic plan, our 2015 plan, it said we want to be the largest startup in our industry. And that's basically a call of no matter how much we scale, we want to stay entrepreneurial and we want to keep that right brain firing all the time. And we talk about that at all our offsites.

David Solomon: So let's talk about sports a little bit. You were early in kind of identifying sports as ripe as an institutional investment opportunity. What convinced you the sector was really ready for that? And how has it

evolved along the lines of your early vision for the evolution of capital formation around sports?

Alan Waxman: So pre-2020, sports team leagues had always bubbled up on our thematic radar, but it wasn't really available to institutional investors. And it really wasn't until COVID that those opened up. And everyone I think knows the reason why, but just to say it is, you go to COVID, if you think about one of the principal revenue streams for a sporting team or a sporting league is people going to games. And that wasn't happening. You turn on any TV during COVID and you were watching, you know, the Champions League and there was no one in the stadium.

So when COVID happened, obviously all the leagues started to rethink this. And we kind of got, you know, we got wind that this was a possibility. So we started -- it went up on our priority list, but we weren't sure it was going to happen because it was such a barrier for institutional investors. And I'll never forget the day or the morning of the NBA, which we always had a very positive view on the NBA because we love basketball but we love the NBA and we love the international opportunities. Like, we

love some of the franchises.

And specifically, we had a view on the San Antonio Spurs. The San Antonio Spurs, the reason we had a view, there were two reasons why we had a view. First of all, a lot of our culture of teamwork, no politics, no BS, that was based on the San Antonio Spurs' culture. But the second reason is that we had, from a real estate group, we had a view that not only we liked the NBA, but Austin and San Antonio -- San Antonio was always viewed as a mid-market team, but we had a view that Austin and San Antonio were going to merge and ultimately over time it would be a major market team.

So that morning, literally, Austin Bowers, one of my colleagues who has worked with me on sports since we started talking about it a long time ago, sent me an email, "NBA just changed their rules." And literally within 10 minutes, cold calls the San Antonio Spurs, their advisor. cold called the league, how do we get in there? And literally within, like, two weeks we had traction, and we ended up doing one of the first deals in the NBA for the San Antonio Spurs.

But I think the key point there is that we're constantly bubbling things in our thematic reader. But when they happen, we have to be adaptive and agile and hustle to make it happen. And that's literally how the whole thing happened. And you fast forward to today in our sports business, we're partnered. One of our theses is we want to be partnered with the biggest global sports brands in the world. So we of FC Barcelona, Real Madrid, we're partnering with the Dallas Cowboys, New York Yankees, San Francisco Giants, San Antonio Spurs, Boston Celtics, and soon to be Bay FC. Bay FC, which is the women's sports franchise in San Francisco, soon to be just -- if you haven't watched NWSL, watch the NWSL. Women's sports, again, another theme we got to early.

It's really getting to things early because if you get to things late, it's generally too late because any theme that's good has a shelf life of 12-18 months.

David Solomon: It's crowded quickly.

Alan Waxman: It goes quick. And particularly with the faster pace of change. And the way we mitigate that is being flexible. So every one of our sports deals, every one

of them is different.

David Solomon: Yeah. Let's talk about risk. What do you see as some of the biggest risks today? And where do you see, on the other hand, mispricing opportunities? What are investors missing?

Alan Waxman: So I'll talk about risk, but embedded in risk there's always opportunities.

David Solomon: Of course.

Alan Waxman: It kind of cuts both ways. But look, the two areas that are the things I'd say we're most worried about is housing and AI. Look, affordable housing in this country, it's the biggest supply-demand, like, dislocation probably out there. There's a shortage of 7 million affordable housing units in the United States. 49% of renters are cost burdened, so they're under some stress. That doesn't work for society. That doesn't work for the economy, and obviously it has political implications. I put exclamation marks on that and I think something we have to deal with because bad things happen when people are stressed and they can't live.

The second thing is AI. Look, I live right in the heart of Silicon Valley. Like, literally, I'm friends with all the tech guys. And look, all the positives, productivity, I believe. Cure cancer, I believe that. I think our deficit, I think it's the one thing that can actually make a dent not only in the US but developed centuries' debt problem. I think I believe that.

I think the challenge and why I say it's the biggest risk and again I have a first-hand knowledge because I live with all of them, I talk to them about it. I think the biggest problem we have -- and I tell a lot of these people very directly -- that there's not enough focus -- the incentive systems, whether it's competing with all the big tech companies, whether it's geopolitical, all the incentive systems are to win, and I don't think there's enough time spent on the societal implications by some of the smartest -- these are some of the smartest people in the room, some of the smartest boards in the room. There's not enough time spent on the impact to the real economy and the transition because the transition is going to be hard.

And I think, you know, what I always say to them is do you

guys at your board level, you guys should have a KPI where 15% of your time is spent thinking about the societal implications of what you're doing. And hopefully you're going to see at some point some of these CEOs, some of these boards adopt that. But I don't think there's enough people thinking about it. They just say it's all going to work out, and I think that's -- and I've said it publicly -- I think it's Code Red. I think it's Code Red.

David Solomon: Pull at that a little bit more because of course the first part of your statement, "It's all going to work out," look, in the long term, all things work out, okay? But yet it's never a straight line, and I'm certainly a big believer that it's not all going to work out. It's going to be bumpy. There's going to be dislocation.

Alan Waxman: Look, these transitions take time. They just take time. And when you look at the big transformations that have happened, these big transitions, there's been enough time for them to actually make these transitions in a way that I'm not sure there's going to be enough time if there's not proactive --

David Solomon: The pace of change is accelerating.

Alan Waxman: The pace of change is accelerating. I mean, the pace of change -- and this is something I think our industry misses, which is another topic. The pace of change started 25 years ago. All those fiber built, all those fiber cables, which by the way are now utilized, the pace of information, the pace of change is changing. It changed back then. You know, social media. Now you have AI. And it's just going to go parabolic.

And I think, look, from an investment environment perspective, the AI is actually, we view it as an opportunity because for real investors, like, the dispersion that's going to take place across not only tech companies, across all industries, is going to be massive and we like change because that's how our business model is built for it.

I think from a society perspective, getting through that transition, I think those are some of the greatest minds in the world, and if they just took 10% or 15% and spent time thinking on that, I think they're going to come up with solutions to avoid the potential train wrecks that could happen as you go through that transition. And that's really what I'm referring to.

David Solomon: Okay. Let's shift gears a little bit. You grew up playing sports. Soccer at Penn. How have your experiences as an athlete, played D1 soccer, how has it affected your leadership?

Alan Waxman: Great question. So I played soccer in college, but my favorite sport was always basketball. My basketball team in -- I grew up in the state of Texas. Great state of Texas, I should say, in Austin, Texas. And our basketball team, we were, like, eighth in -- we started the season, we're eighth in the state. And we were going to play Waco University in Waco, Texas. I think they were ranked, like, second in the state.

And I'll never forget to this day, walking in the gym. It's, like, kind of a dark gym. And we start warming up. The other team's warming up. Everyone's dunking. They're all, like, six to eight inches taller than us. They're 30 to 40 pounds more than us. And we're literally -- literally, the people in the stands, it was packed because it was a big game -- literally, like, they're laughing at us. They're literally laughing.

And we started to, like, look at each other. These are people I started -- we started playing basketball together, this team, from the time we're like eight years old. So we had played all through junior high and high school. And I'll never forget, like, and we were kind of -- it's pretty intimidating when you go to those dark gyms. And literally, we beat them by -- we ran them out of the gym. We beat them by, like, 30 points. Like, literally ran them out of the gym.

And it's something I always knew, but that really ingrained in my head and obviously a number of other data points of just the power of teamwork because we played team offense, we played team defense, and we were just connected with each other. And from a leadership standpoint, that really for me, everything that I'd done in my life, everything we've done at Sixth Street, everything even here at Goldman, it's all about teamwork. Teamwork wins.

And by the way, teamwork in culture is the antidote for this changing environment. The pace of change, the way you win is you have a strong culture, you have strong teamwork.

David Solomon: Let's pivot and talk about Goldman Sachs. Tell the story about how you wound up at Goldman Sachs.

Alan Waxman: Okay. Well, first of all, I just needed a job because I didn't have any money. I didn't have anything to fall back on. I don't know if you know this, David, but in college I was an international relations major, so I knew nothing about finance or business. But I had 35 interviews, like my senior year at college. I didn't have a job.

And at Goldman Sachs, I interviewed with four different groups, and I got ghosted four times. They didn't call me back. I hope when you guys interview, just send a message, "Hey, you're not good enough." Just send a one-line email. But I got ghosted, like, 35 times. All my friends are at all these firms, they're all doing cool stuff, and I started studying for the CFA. Got smart enough to go interview. And before I started to go interview, I was coming back from Thanksgiving, from Austin, Texas, and I was on a plane. And there's this guy sitting next to me who's, like, reading research reports, like, a thousand miles

per hour, massive processing speeds. This guy, Jody LaNasa. And I just started talking to him because I was studying for the CFA. I had all my books out. I was trying to, like, understand what I didn't know.

And we started talking. He started telling me this new group he joined, which was the predecessor group for the Special Situations Group. And he's telling me about it, and we start talking. And it's interesting. And, you know, then we kept in touch after. We played some basketball together, and we got to know each other. "Hey, why don't you come in and interview," because I was going to start to re-interview.

So I came in and interviewed, and this time, you know, ended up getting the fifth time, I guess the charm. Ended up, you know, luckily getting a job. I don't think anyone else would have hired me, but Jody was, like, a pretty persuasive guy. And I think he wanted me on his, like, his community basketball team. That's what I think the real reason is. He actually wanted me on his basketball team. But got me in the door. And I was just, like, wow, these are the most impressive people.

And anyways, that's how I got to Goldman. It's not a linear path.

David Solomon: You've been talking a bunch about, you know, teamwork. When you're putting a team together, talk about what you look for in other people.

Alan Waxman: Shared values. Ability to play a role versus not "me, me, I" people. People that are willing to celebrate each other's successes and people that are over themselves. I think one of the problem -- like, one of the unlockings of teamwork, the first thing -- and this is a plague in our industry -- is that the ratio of people that are over themselves that are people not over themselves, it's not a great ratio. And I think you can't be a true teammate, you can't be a true team member until you're over yourself, because then you open yourself up to learning, you open yourself up to new ideas, and so I'd say tenth's number one. The first principle is, like, get over yourself.

I think the second thing is that it's like the basketball team. If all of us wanted to shoot three pointers and shoot the ball all the time, we would have lost. So I think having

everyone understanding clearly what their roles are, wanting to play the role all for the purpose of the team winning, I think that's incredibly important not only as a just general teamwork but also just for an investing business. If you're a multi-strategy private capital investing business, there's fiefdoms, there's silos, you're not sharing relationships, you're not sharing information, you're not celebrating each other's successes, you're not running to problems.

Like, a lot of times there's a problem and people, like, run away from it like it's a bad investment or they run away from it. Or they don't want to, like, talk about it. No, you got to face it head on.

And I think those things and people willing to play a role on the team, all for the betterment of the team versus their ego, and then having strong leaders in each of your businesses. And there's three times in my career some of the best people I've had to fire because, although they were super talented and drove a lot of value for us, they made the team worse. And I think that's the test.

So those are the things that we think about. But really it's

like getting everyone to work together as one, all with the idea of climbing up the mountain together. That's how we think about it.

David Solomon: Those are hard decisions, but they're generally right decisions when you make them.

Alan Waxman: You never regret peeling off the Band-Aid on that. We've never regretted. Every time we've done it, "Oh, we're going to lose this and that." And every time we do it, like, because it allows people, it allows sun to shine.

David Solomon: It allows others to --

Alan Waxman: And they step up. And people step up.

David Solomon: Yeah. Any advice for those in the room about how to succeed at Goldman Sachs and beyond?

Alan Waxman: Coachability and intentionality.

David Solomon: Two good words.

Alan Waxman: Coachability, first of all, you can't be coachable, as we talked about, unless you're over yourself. If you're not over yourself, you're not opening your experience to learning. You got to learn. And I think the other thing, actually something, David, I don't know if you remember this. But when you were first hired, they did this big conference call. It was back -- you probably remember this, David. They did this conference call, and they were describing you. I don't know if you were on this call.

David Solomon: I don't remember it. If I was, I don't remember it.

Alan Waxman: But I'll never forget it. Vividly I remember this. They were describing you, obviously super talented, you were a big name, and outside, had done great at Bear. But one of the first things they said about you is that you were a great listener. And that was, like, kind of -- that was a little bit -- I was, like, why are they saying that as one of the first things? Because I was a young kid. I didn't really know. But it really registered with me.

And I think coachability is not only about being coachable,

over yourself, but being an active listener. And every time we interact, like, you're just a great -- like, you're doing it now. You do that face. You get this face. You've got this face where it's, like, you're just a great listener. And you listen. And then, you know, you can tell whenever you respond, you're responding to actually what I said versus trying to get -- like, it's one of your superpowers. But I'll never forget when they introduced you, they said that.

And I think part of the coachability is obviously over yourself, but it's also being a great active listener.

The reason why I say intentionality, I think some people do that but they don't write things down. You know, you think about as an investor, like, we analyze companies all the time. And, like, if they don't have a 5-year strategic plan, they're not, you know, really super detailed about their compass and where they're going, you'd be like, "Well, how could I ever invest in the company? How can the team know where they're going if they don't have a strategic plan?" Well, it's the same thing with yourself.

Like, how many of you have your own strategic business plan? You don't have to answer but my guess is you don't.

But you should. And I think you've got to be intentional about your skill sets. Like, I want to learn -- okay, my first year at 22 years old, I don't know anything because I'm a History major, Political Science, I know nothing. Okay, what are the five things I got to learn? Okay, knock off three of those. Two go to the next year. Three are off. I've got notepads. Doing that. Okay, add three more.

You do that over 10 years, 20 years, 30 years, it compounds. I think Warren Buffet said that the eighth wonder of the world is compounding returns. Well, the ninth wonder of the world is compounding your toolkit. Like, if you do that over 10, 20, 30 years, you'll wake up and your return on time, your ability to be with your family more, make those good judgments, it's all there.

So I think being incredibly intentional and writing things down just like you would expect a company to do, I think that's the two pieces of advice that I give. Coachability and intentionality.

David Solomon: When you think about the next ten years, what does success for Sixth Street look like? And what does success for you as a leader look like?

Alan Waxman: So Sixth Street, we think about, or I think about, 5-year increments and 80 years, when I'm 80 years old. The 80-year-old part is let's just think five years and over the horizon. So this will sort of your answer your 10-year question.

David Solomon: I mean, for you, 80 is a long time. Like, for me, it's starting to come into focus.

Alan Waxman: Okay, well, you're doing well, man. So 80 years old, look, we call it the 80-year-old test. It's like being able to walk in any office at Sixth Street and this would be success. Any office at Sixth Street, any group, any meeting, and walk in. Are people playing tennis? Are they sort of sharing ideas and collaborating? Are they treating junior people with respect? You know, are they substantive? Are they prepared? How are they interacting? Because that's literally how Sixth Street was built. So that was, like, the 80-year-old test.

And then also with each person in the room, are those people you'd introduce your family to? We call it the Family Test. So that would be success, like, none of this

stuff matters. The reality is, like, they might remember you because you're the CEO of Goldman Sachs. No one's going to remember me or any businessperson.

Like, when people ask me -- I was at some conference. Someone asked me: What's your legacy? No one's going to remember me. You'll be remembered.

David Solomon: I'll remember you.

Alan Waxman: Well, okay. Well, we can share coffins. But no one's going to remember me, and no one's going to remember most of the people in our industry. Maybe if you're CEO of Goldman Sachs. So it's like really what you leave behind is, like, how people interact with each other. So I'd say that's kind of the 80-year-old, over-the-horizon test.

The 5-year thing, and we just went through our 5-year strategic planning process. And this is, like, an 18-month process and we go through it with our 5-year strategic plans. It's multiple partner meetings, hundreds of hours of partner meetings, 140 pages, five strategic planks, a bunch of sub planks. We're in our fourth iteration. And on this

one, particularly given what's going on in the industry, is that one of the things that's very clear we just kind of reset our valves is that we want to be an investor-first firm. That's literally plastered all over our five strategic plans. So we're going to be incredibly intentional about being an investor-first firm. So I think for us over the next five years, it's just continuing to be an investor-first firm. And then over the horizon, it's just passing that 80-year-old test and that family test. That would make me happy.

David Solomon: Great intentional goals. Alan, thank you.

Alan Waxman: Thank you.

David Solomon: This has been awesome. Appreciate it. Thank you for joining us. Appreciate it.
